Dear all,

On Tuesday we will have our regular pandaroot meeting. The main topic of this meeting is the analysis status for the tracking TDR studies. I would like to ask all those who work on the analysis of one of the physics channels to prepare a few slides, summarizing the status of their analysis. Hence, the agenda:

1) General items

2) Simulation studies for tracking TDR:

- brief status report of software and computing infrastructures
- report on status of the several analyses
- summarizing critical problems and strategy on how to proceed

3) A.O.B.

Greetings,

Johan.
