Hi stefano,

In interactive mode with TBrowser, I can see correct info from MCEventHeader(FairMCEventHeader), but I couldn't get anything via
Quote:FairMCEventHeader *mc_info = (FairMCEventHeader*)event->At(i);

Simply I have zero entry from mc_info->GetEntriesFast();

So I do "NOT" understanding the way for using the FairMCEventHeader object in the simulation file.

I'm waiting for your teach
Donghee
