Hi, Stefano

First of all, you are perfectly right, I have made mismatching between MC true and reco. I had to use `tree->GetEntry(i-1)`; but I put "i", so all index was shifted
It is now corrected and all data need to be re-analysed.
I think that vertex resolution will be fine, result will be posted in forum soon.

By the way, did you test psi3770 with TPC data?

regard,
Donghee
