Dear PandaRooters,

I would like to invite you to the "Time-Based-Sim-Workshop" at the next collaboration meeting. It will take place on Monday (5.9.) and Tuesday (6.9.) in the morning starting at 9:00.

The aim of the workshop is to get all developers of the different sub-detectors together, discuss about the concept of time based simulation and directly try to implement it into your sub-detector code.

Thus it would be nice if from each sub-detector an experienced developer would be present.

You should bring your own laptop with the May11 external packages installed. I will announce the required pandaRoot version shortly before the meeting.

I hope to see you all at GSI

Tobias
