Dear Donghee,

When you create your collection you should exclude the zip file (which is actually the archive that contains all the others).

Could you please try again with

find -c test-run1002_900_1 /panda/user/p/pbarprod/tdr11/output/mix/psi3770/run1002_900/1/ *.root

or any pattern that includes the desired files but excludes the *.zip ?

Dan
