Hi,

the first 20 events are always aligned.

The number of events is equal to the number of events of the input file +1.

points -> 20

digi = points + 1 = 21

reco = digi + 1 = 22

pid = points + 1 = 21

In reco macro the input file is digi (21), and points is added as friend.

In pid macro the input file is points (20), and digi/reco are added as friends.

I hope I made everything clear.
