Dear all,

I built a fresh PandaRoot version from the trunk (revision 13793), compiling went fine, however when loading the libraries I get an dlopen error:

```
root [0] gROOT->LoadMacro("$VMCWORKDIR/gconfig/rootlogon.C");
root [1] rootlogon()
dlopen error: /u/olaf/panda/pandaroot/build_lenny64/lib/libParBase.so: undefined symbol:
_ZN10FairLogger9GetLoggerEv
Load Error: Failed to load Dynamic link library
/u/olaf/panda/pandaroot/build_lenny64/lib/libBase.so
(int)(-1)
```

Make clean, make, or a new cmake do not help ... any hint?

Cheers
Olaf.
