Subject: Looking for a valid reconstruction chain Posted by Ronald Kunne on Thu, 19 Jan 2012 17:10:28 GMT View Forum Message <> Reply to Message

This morning I installed the jan12 externals with version 14184. This was my first upgrade since june 2011 or so.

Usually I take my "reconstruction chain macros" from trunk/macro/pid and these are like:

root run\_sim\_sttcombi\_pgun.C"(1000,-11,0.2,10)" root run\_digi\_sttcombi.C root run\_reco\_sttcombi.C root run\_pid\_stt.C

But in the new version the probabilities are all set to 0.2 for ALL detecteurs. Some of the EMC cluster information seems to be missing as well (which might explain why the probas are wrong).

So the question is: can somebody point me to a valid reconstruction chain including the pgun and evtgen macros?

Thanks in advance, Ronald Kunne
