Hallo Ralf,

I have myself Mac OS Lion and it works (it was tested there before any other system)! Also the the "hotfix" for Pythia should be there! So from your output it seems that Geant4 installation went wrong and the FindGEANT4.cmake do not find it. My question did you install a fresh copy of the jan12 or update your old one?

It is funny also that Simone get the same errors on Etch as you on MAC, So the only explanation I can think about at the moment that you try to install in the same directory where something was already installed. if this is not the case then we have to add more oil to the fire.

Mohammad
