Hi,

I can confirm the problem just reported by Marius. I see exactly the same feature: both K+ and K- (KaonVeryLoosePlus/Minus) lists are empty.

In addition I found that the "Charged" list contains only protons and charged pions. Obviously Kaons are no longer recognized as charged particles in the present trunk version!

Concerning the suggestion to use PndAnalysis instead of PndEvtReader: I suggest that we keep functions that work also working in newer releases unless there are serious arguments against using them any longer (this should be communicated beforehand), independent of the question whether or not alternative solutions exist.

Best regards,  
Albrecht
