Hi Ralf,

thanks for your reply. PndEventReader appears to use PndPidListMaker to fill the particle lists, so some changes there might affect the event reader as well.

I managed to replace PndEventReader with PndAnalysis for testing purposes only and here the kaons are found. However I must stress that the replacement I have done is only very rough and checking everything for consistency to be able to trust the results after such a rather severe change is not so trivial in a >1000 lines analysis macro, thus I second Albrecht's comment that working tools should only be replaced if there are really serious reasons.
