Hello,

For clarification:
I also checked Marius' analysis macro run_ana_evt8.C in macro/run/tdrct/psi3770 which had worked before, now with NEW data created with the full simulation chain in the present trunk version. It doesn't work anymore, the charged kaon lists are empty.
I do not see the reason to modify the previously working macros (used for the CT TDR benchmark channels!) in order to make them functional in an updated Pandaroot version. Could I kindly ask the person(s) responsible for the changes that disable these macros to please take care that the previous fuctionality is reestablished.

Albrecht
