Good Morning.

I think to have found the issue. Please update the Analysis Tools to trunk 14219.

The problem was a leftover addition to PndPidListMaker to support "best" and "all" criteria as well. This is now fixed and you should be able to use e.g. "KaonAllPlus" (all charged candidates, but with the kaon mass set) or "KaonBestPlus" (only particles with the Kaon pdf value being largest).

Sorry for any inconvenience.

Personal remark: STT TDR macros are not meant to be forward compatible. There is a fixed Fairsoft/PandaRoot release for that. The trunk is a development branch, which only has to compile. Anyway I'm glad you guys found that bug and stimulated a longish post on the PndAnalysis usage.

Cheers

Ralf
