Subject: GSI Cluster: global gcc environments?
Posted by Stefan Pflueger on Wed, 29 Feb 2012 15:36:50 GMT

Hello,

I'm trying to use the Cluster at GSI for some computations. So far without complete success. My problem is that the batch systems are running the 64bit lenny while my program was compiled by the 32bit lenny machines (that I default to). Then at runtime common shared libraries like libgfortran.so are not found. Is there some nfs path with fixed gcc environments that I can set to use on both systems (so some kind of common ground for both systems)? Or how do I proceed...

Best regards,

Stefan

p.s. Sry in case this topic is not in the correct subforum, but it looked like the best match to me.
