Hi Raghav,

In your code there are many small errors, you forget to add some classes in the LinkDef file, and you where missing some includes. I corrected it, change the name of passive to eicpassive and change the structure in a way that you add it simply to the example directory and then add the line. "add_subdirectory (eicroot)" to the CMakeList.txt in the example directory. I could compile and load the libraries but I do not have the geometry files to run it. Please test it and let me know.

Mohammad
