Hi,

This time I got a crash at the beginning of the reco macro (start random seed = 26), otherwise all conditions as for the recent crashes.
The digi macro has finished normally and has correct size (18.5 MB):
Macro finished succesfully.
Output file is evt_digi_stt.root
Parameter file is evt_params_stt.root
Real time 1849.92 s, CPU time 1847.09 s

The reco log file is attached. What does it mean:
!!!
locf_() Warning: changing base from 7f2c00000000 to 7f2d00000000!!!
This may result in program crash or incorrect results
!!!

I have never had this before.

Best regards,
Albrecht
