Hi,

This time I got a crash at the beginning of the reco macro (start random seed = 26), otherwise all conditions as for the recent crashes.

The digi macro has finished normally and has correct size (18.5 MB):

Macro finished succesfully.

Output file is evt_digi_stt.root

Parameter file is evt params stt.root

Real time 1849.92 s, CPU time 1847.09 s

The reco log file is attached. What does it mean:

locf_() Warning: changing base from 7f2c00000000 to 7f2d00000000!!!

This may result in program crash or incorrect results

I have never had this before.

Best regards, Albrecht
