Subject: Re: crash in reco macro Posted by Florian Uhlig on Wed, 25 Apr 2012 06:40:05 GMT View Forum Message <> Reply to Message

Hi Albrecht,

This is an internal error from Geant3 which reports that is has a problem with setup of the internal memory banks. The error actually means that Geant3 is not able to relocate his internal memory structure.

This error happens sometimes on 64bit machines and depends probably on the actual memory layout on your computer. If you run the macro again the error should be gone.

Did you try to run the macro a second time? If not please try again.

Ciao

Florian
