
Subject: Radiation length units

Hello!

Can you tell me what units are used for radiation length in FairRadLenPoint?

When I do GetRadLength(), I get numbers up to $3000 * 10^{(30)}$! I thought that units are cm instead of $g/(cm^2)$, but even if I multiply it by density, which I get via GetDensity(), I get numbers up to $100 * 10^{(15)}$.

Thanks in advance.
