Hello!

Can you tell me what units are used for radiation length in FairRadLenPoint?

When I do GetRadLength(), I get numbers up to  $3000 * 10^{(30)}$ ! I thought that units are cm instead of  $g/(cm^2)$ , but even if I multiply it by density, which I get via GetDensity(), I get numbers up to  $100 * 10^{(15)}$ .

Thanks in advance.
