Thank you very much for the reply.

I would ask if there is anything i can do to make it work with this package, like get a previous version of trunk or something else. Because i have already tried twice to install Jan12 packages but they gave some errors which i was unable to get past. That is why i tried out the may11 package. At present i do not have the record about what those errors were. So please tell me if i absolutely need to install the jan12 packages.

Thanks in advance
