Hello.

Yes, you may modify pidana.par and put you own numbers there. (Execute create\_par.sh to have that in all.par, too)

I suggest you use the "Variable" line for your user definitions and use "Variable" instead of "VeryTight" etc.

Still I'm uneasy with having "default" numbers next to "user" numbers in that paramerter file. On the other side, hardcoding the values for "Tight" etc. is not nice either. Any idea?

Cheers,  
Ralf
