Subject: Re: combinations of pid algorithms Posted by Ralf Kliemt on Thu, 17 May 2012 08:28:15 GMT View Forum Message <> Reply to Message

Hi.

In other words: when you increase the probability of a particle being a proton the other probabilities will drop accordingly.

You should also be really careful which PID you want to include for which particle species. Soem detectors might introduce unnecessary mix-ups. Always crosscheck with MC information to be safe.

Cheers, Ralf.
