Hello Florian (and others),

I also think this is a very good way to manage the output. However, I have tried to incorporate it into my macros and it does not yield the hoped-for result.

I have put the lines you wrote in my run_sim_... macro (see attachment to this post), and what I get as output to the screen does not seem to be any different from before. The only output that gets directed into my log file is:

Quote:

```

Is this behavior a bug or am I doing something wrong?

Best wishes,

Martin
