Hi all,

I have improved pi+pi- mass distribution in DPM. For this, quark mass distribution is improved, and production of f2 meson is added for the first time in DPM generator.

I attached fig., where pi+pi- mass distributions for pbar-p annihilation events at $P_{lab}=9.1$ GeV/c are calculated by new version of DPM, model FTF in GEANT4 and UrQMD+SMM model.

As you can see, calculations by DPM reproduce exp. data given by points better than other models.

Aida
