Dear All

I make simulations with the EMFFgenerators (pbarp -> pi+ pi-) developed by the Mainz group and using the new external packages "jan12".

With a large number of simulated events (10^4 events) the job crashed at the end and i got the following error.

```
*** glibc detected *** /projet/panda/dbeyssi/pandaroot12/jan12/tools/root/bin/root.exe:
munmap_chunk(): invalid pointer: 0x00000000d663760 ***
```

The root file is good and can be analysed. However i make simulation on a grid and i need that the generation of events finishes correctly, to be able to execute the next step (digitization).

This problem disappears if i use the previous version of external packages "may11".

Does anyone has a solution for this problem?

in attachements, you find the simulation macro and the output file.

Thank you in advance.

Alaa Dbeyssi
