I have just received an answer to my Email that I sent to the Warwick team. They believe that the VVPIPI decay model should work fine with the changes. However, they will evaluate if they find a method for setting the ProbMax value which is general enough to apply to other decay models as well.

Quote:

Dear Martin.

Thanks for this information, we will cross-check and see whether this is best option to proceed or whether we find better way. One of the issues is that proper setting of maximum probability is not bound to VVPIPI model, but it appears on many other places, so we want to look for solution which is general and and solid for all models.

What you did for now should be fine for your purposes (as long as you do not get error message again).

Regards,

Michal
