Hallo Franz D.,

vielen Dank für die Rückmeldung.

Ich habe einen ServiceRequest bei NI laufen. NI Deutschland und USA können den Crash auch nicht reproduzieren.

Seltsam Franz Josef konnte den Fehler reproduzieren.

Die Antwort aus den USA lautet:

"In regards to your question, I was unable to reproduce the crash on my computer as well. I have investigated into the issue a little more, and there were some issues known with the Set Cell Value property.

1. The error might be due to the fact that the table needs to have its cells initialized first before they can be set. It could be that as the program is running for an extended period of time, LabVIEW is having difficulty allocating the necessary memory for the additional table cell.

How long is your customer running the program before it returns the error?

If it's for some time, the reason for the crash is that LabVIEW is running out of available memory on the computer to allocate for the table.

2. Also, there was a CAR in LabVIEW 6.1 where setting values of the table was giving errors when the table was an indicator. Change the table to a control instead and see if this changes anything."

Kann mich jetzt kurzfristig nicht mit der Sache beschäftigen. Jede Rückmeldung aus dem Forum ist weiterhin willkommen.

Spätestens wenn die Sache gelöst ist werde ich das Ergebnis hier posten.

Gruss aus dem Norden

Manfred
