---

Dear all,  
Today I have upgraded my Ubuntu to 12.04.

I have downloaded jan12 external packages, and I have found the following errors while doing the checkout:

```
A  jan12/transport/chetc.dat
A  jan12/transport/vgm_cmake.tar.gz
A  jan12/transport/xsneut.dat
Errore nella validazione del certificato del server per 'https://root.cern.ch:443':
- Il certificato non è stato creato da un'autorità fidata.
  Usa il codice di fingerprint per verificare il certificato manualmente!
- Il nome host del certificato non corrisponde.
Informazioni del certificato:
- Nome host: lcgapp09.cern.ch
- Valido: dal Wed, 02 Nov 2011 14:46:55 GMT al Thu, 01 Nov 2012 14:46:55 GMT
- Autorità: cern, ch
- Fingerprint: bb:85:2d:51:ea:e6:f5:52:ae:92:c3:a5:56:65:87:65:69:e8:9e:8e
(R)ifiuta, accetta (t)emporaneamente o accetta (p)ermanentemente? p
svn: attenzione: Error handling externals definition for 'jan12/transport/geant3':
svn: attenzione: OPTIONS di 'https://root.cern.ch/svn/geant3/trunk': 200 OK
(https://root.cern.ch)
svn: attenzione: Error handling externals definition for 'jan12/transport/geant4_vmc':
svn: attenzione: OPTIONS di 'https://root.cern.ch/svn/geant4_vmc/trunk': 200 OK
(https://root.cern.ch)
```

Ok, in italian, but you can see that the code is not downloading geant3 and vmc. The translation is:

```
Error in the certificate validation if the server https://root.cern.ch:443
- the certificate was not created by a trusted authority.
  Use the fingerprint code to verify the certificate manually!
- the hist name of the certificate does not correspond
```

If I try to compile it, of course I have the following error:

```
patching file plugins/scatter_mod/PSaidLowEnergy.cc
*** Pluto compiled successfully ***
*** Compiling Geant3 .....
*** ERROR: Geant3 could not be created.
*** End installation of external packages with Errors***
```

What is wrong? It was not appearing with my former 11.10.
