Subject: Re: My updated fairtools library not loading
Posted by Mohammad Al-Turany on Sun, 24 Jun 2012 05:32:10 GMT

HI Raghav,

you cannot use FairTools library to add your stuff! even if it has originally only one file, this was done because this file is used everywhere, and the library holding this file has to be loaded before anything else. Adding anything here which depends on any other package of Fairroot will not work!

So why not to create your own library, EICTools or whatever you like? copy the whole stuff you put in fairtools to a "eictools" directory, modify the CMakelist.txt by replacing FairTools with EicTools (also remove the FairLogger from your EicTools directory). In the FairTools directory, either you get it again from the SVN or call "svn revert" there to go back to the original status.

regards,

Mohammad
