Hi Stefano

the digi file is not created. that is the actual problem. Even though it says that
Processing eic_reco.C...
MCFile : data/eic_tau_p_without_selection.mc.root
DigiFile: data/eic_tau_p_without_selection_mc_digi.root
RecoFile: data/eic_tau_p_without_selection_mc_reco.root
FairRootManager::OpenOutFile("data/eic_tau_p_without_selection_mc_reco.root ")

I cannot see the digifile in my data directory. But i do see the reco file.
This is what i dont understand since i dont see any difference between the way i create both
the files

Cheers
Raghav

UPDATE: I played around with the reco file in panda
(pandaroot/macros/run/reco_complete_stt.C) and it is also giving me the same error.
It also says that it is not able to see the digifile even though it says that it creates it.
