I am trying to install cbmroot in my ubuntu Scientific Linux CERN SLC release 5.7 (Boron). at the time of configuring(./configure.sh at fairsoft) I get the following message:

.
.
*** Package pluto is OK ***
*** Compiling Geant3 .....
gphys/gdalet.F
gphys/gdalitzcbm.F
gphys/gdecay.F
Generating /collaborators/bose/ramaprasad/fairsoft/transport/geant3/lib/tgt_linux/l
ibgeant321.so
/usr/bin/ld: added/loadmod.o: relocation R_X86_64_32 against `a local symbol' can not be used when making a shared object; recompile with -fPIC
added/loadmod.o: could not read symbols: Bad value
collect2: ld returned 1 exit status
make: *** [/collaborators/bose/ramaprasad/fairsoft/transport/geant3/lib/tgt_linux/
libgeant321.so] Error 1
**** Checking libraries in
/collaborators/bose/ramaprasad/fairsoft/transport/geant3/lib/tgt_linuxx8 664gcc ****
scripts/functions.sh: line 233: cd:
/collaborators/bose/ramaprasad/fairsoft/transport/geant3/lib/tgt_linuxx8 664gcc: No such file or directory
*** ERROR: Geant3 could not be created.
*** End installation of external packages with Errors***

how to solve it? Anyone can help me?

Thanks,

Ramaprasad
