Hi Mohammad,
in my home directory there is no rootlogon.C.

If I keep the rootlogon.C inside the directory where I am calling root I get the message:
Quote:Warning in <TEnvRec::ChangeValue>: duplicate entry
<Library.TVirtualMagField=Base libFairTools.so libParBase.so libGeoBase.so libProof.so
libGeomPainter.so libGeom.so libVMC.so libEG.so libMathCore.so libPhysics.so libMatrix.so
libTree.so libHist.so libRIO.so libCint.so libCore.so> for level 0; ignored (int)0
and then the histograms @ 0.

If I remove the rootlogon, it also shows a very long list of:
Quote>Error in <TClass::New with placement>: cannot create object of class FairMCPoint
version 4 at address 0x1b63490
but it still does not work.
Lia.
