Hallo Stefano,

You need to modify your function to:

```
FairRuntimeDb* rtdb=ana->GetRuntimeDb();  
FairBaseParSet* par=(FairBaseParSet*)(rtdb->getContainer("FairBaseParSet"));  
par->SetGeometry(gGeoManager);  
par->setChanged();  
par->setInputVersion(ana->GetRunId(),1);
```

In fact we could also automate the saving of geometry from the FairRunAna if this is needed by all, in any case please test the above stuff and let me know.

regards,

Mohammad
