Right Mohammad. And this is the one I installed yesterday with the help of Radek and gives me the version 3.4.0.

Could you try if this is the right version? Maybe I did something wrong...

I could try to delete all gfortran versions I have in the /usr/local/bin/ foder (because is starting to be a bit messy) and try to install gfortran again, starting from scratch...

Let's see...
