Thanks for suggestion, Florian, but it does not work.

Disabling krb5 leads to TSSLxxxx failure of compilation. Disabling both ssl and krb5 leads to "rpdutils" and "TWebFile" failure of compilation.

And I can not update linux to the latests, since it's institute's PC farm and it's administered by IT dep. They have some rules (coming from CERN grid I think) which does not allow them to upgrade for the moment.

So,

Any further suggestions?

Thanks.

Dmitry
