Hi,

I'm wondering about an example code under PANDARoot/macro/pid/pid_check.C

A probability with name of flux is introduced

Quote:

```
PndPidProbability *flux = new
```

```
PndPidProbability(239+237,114+101,2282+2375,35+42,517+1052);
```

Where do these numbers come from ?

Best regards,
Donghee
