

Hej,

I am trying to run the event display in pandaroot/macro/pid in order to prepare some simple tasks for undergraduate students. the problem is that it crashes. First it seemed to crash because of multiple initialisation, so I commented out the line

```
fRun->Init();
```

Then it does not crash anymore during the initialisation, however it complains about some missing branches:

```
[INFO ] Branch: TofPoint not found in Tree
[INFO ] Branch: TofPoint not found in Tree
FairPointSetDraw::Init() branch TofPoint Not found! Task will be deactivated
[INFO ] Branch: TofSciFPoint not found in Tree
[INFO ] Branch: TofSciFPoint not found in Tree
FairPointSetDraw::Init() branch TofSciFPoint Not found! Task will be deactivated
Info in (PndGeoHandling::Instance): Making a new instance using the framework.
[INFO ] Branch: SttHelixHit not found in Tree
[INFO ] Branch: SttHelixHit not found in Tree
FairBoxSetDraw::Init() branch SttHelixHit Not found! Task will be deactivated
[INFO ] Branch: TofHit not found in Tree
[INFO ] Branch: TofHit not found in Tree
FairBoxSetDraw::Init() branch TofHit Not found! Task will be deactivated
[INFO ] Branch: TofSciFHit not found in Tree
[INFO ] Branch: TofSciFHit not found in Tree
FairBoxSetDraw::Init() branch TofSciFHit Not found! Task will be deactivated
```

though without crashing. Later, when trying to process events, it crashes with message

```
-E- PndGeoHandling::GetPath(Int_t shortID): Missing SensorNamePar
```

I also tried a different eventdisplay macro (see attachment) but there is still a crash, with message

Hits in TrackCand:

```
(-1/-1/-1/-1/1)TimeStamp: -1 +/- -1
(-1/-1/19/0/1) (-1/-1/19/1/1) (-1/-1/19/2/1) (-1/-1/19/3/1) (-1/-1/19/4/1) (-1/-1/19/5/1)
(-1/-1/19/6/1) (-1/-1/19/7/1) (-1/-1/19/8/1) (-1/-1/19/9/1) (-1/-1/19/10/1) (-1/-1/19/11/1)
(-1/-1/19/12/1) (-1/-1/19/13/1)

-E- PndTrackCandDraw::GetVector : Unknown Detector with ID: (-1/-1/19/8/1)
-E- PndTrackCandDraw::GetVector : Unknown Detector with ID: (-1/-1/19/9/1)
```

-E- PndTrackCandDraw::GetVector : Unknown Detector with ID: (-1/-1/19/10/1)  
-E- PndTrackCandDraw::GetVector : Unknown Detector with ID: (-1/-1/19/11/1)  
-E- PndTrackCandDraw::GetVector : Unknown Detector with ID: (-1/-1/19/12/1)  
-E- PndTrackCandDraw::GetVector : Unknown Detector with ID: (-1/-1/19/13/1)

\*\*\* Break \*\*\* segmentation violation

In the run\_sim\_sttcombi\_pgun.C file I added the line fRun->SetStoreTraj(kTRUE);

Does anybody have an idea what one can do about the crash? I suppose there is a mismatch between the event display macro and the detector description used in the simulation-digi-reco part but I don't really know how to check it.

Kindest regards,  
/Karin
