Greetings

I have solved this small hiccup.
I am attaching a .tar file which will install PLUTO++ >= 5.4 on any UNIX machine.
Was tested on Ubuntu, and Mac 10.7.4 Lion

Instructions:
Untar PLUTO_UNIX_Install.tar in the directory where pluto_v5.40.x
is located. Change directory to PLUTO_INSTALL_scripts
cd PLUTO_INSTALL_scripts
source configure.sh

By default PLUTO will be installed in the pluto_v5.40.x directory,
however there is an option to install in in any directory.

I hope this helps anyone trying to use PLUTO on a Mac.

Michael
