Greetings

I have solved this small hiccup.

I am attaching a .tar file which will install PLUTO++ >= 5.4 on any UNIX machine.

Was tested on Ubuntu, and Mac 10.7.4 Lion

Instructions:

Untar PLUTO\_UNIX\_Install.tar in the directory where pluto\_v5.40.x

is located. Change directory to PLUTO\_INSTALL\_scripts

```
cd PLUTO_INSTALL_scripts
```

```
source configure.sh
```

By default PLUTO will be installed in the pluto\_v5.40.x directory,  
however there is an option to install in in any directory.

I hope this helps anyone trying to use PLUTO on a Mac.

Michael
