Greetings,

I am not sure if I am doing something wrong, or the model technique is flawed, or both.

I have a distribution $\cos(\theta)$ vs. differential cross section, see plot below

I then take this TGraph, and by using TSpline5, draw a histogram for PScatterCrossSection, see figure below.

I then use this histogram as seen in the sample macro

Input: $_x$ is c.m. $\cos(\theta)$, $_y$ is the $d\sigma/d\cos(\theta)$

Output: $_f$: cross section

```
model->AddHistogram(example,"value = Eval(_x); _f = _y * value");
```

The output of PLUTO generated looks nothing like the inputted, as it can be seen from the first 2 figure to that of the figure below

Moreover, the macro I use stipulates the c.m energy range as

```
model->SetRange(2.2,2.22); //in GeV
```

which corresponds to 2.11 to 2.16 GeV beam energy in lab frame for the reaction $g + p \rightarrow p + \eta$. As can be seen from the figures below, from using the functions

```
my_reaction.Do(histo1,"_x = [g+p]->M());
```

for c.m. energy, and

```
my_reaction.Do(beamProfile,"_x = ([g+p]->GetBeam())->E();");
```

for lab energy, neither of these plots correspond to the input given in the macro.

I can no longer attach any more files, so I am adding my macro in the text body.

Another note, when using ROOTs ALCiC to compile the macro, I had to add these lines into the PScatterCrossSection.h

```
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PAngularDistribution.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PPProjector.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PF2EvalBatch.h"
```

Here is my macro

```

#include "TGraphAsymmErrors.h"
#include "TH1.h"
#include "TH2.h"
#include "TH3.h"
#include "TChain.h"
#include "TCanvas.h"
#include "TF1.h"
#include "TGraphAsymmErrors.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PParticle.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PReaction.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PBeamSmearing.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/src/PAnyDistribution.h"
#include "/Users/Mike/Pluto/pluto_v5.40.5/plugins/scatter_mod/PScatterCrossSection.h"
