Subject: Re: DPM theta cut off Posted by Simone Bianco on Mon, 27 Aug 2012 15:37:25 GMT View Forum Message <> Reply to Message

Dear Donghee,

Thomas performed a detailed analysis of the effect of the theta_min cut-off. In his thesis (that you can download here http://hss.ulb.uni-bonn.de/2011/2623/2623.pdf) you can find his parametrization in order to select the correct cut-off as a function of the beam momentum (see section 6.1). The DPM code might have changed a bit in the meanwhile, but I think this could be useful for you anyway.

Regards,

Simone
