Hi,

I have downloaded the fairsoft (jan12 version )through svn command.  
Since Geant4 is downloaded while we are configuring using the command ./Configure.sh.  
Somehow it is not downloading GEANT4 and giving error (see attached file).

After that I downloaded all those files directly from the  
<http://geant4.cern.ch/support/source> and kept it in "transport" directory.  
But I was not able to install either way.

What is the solution?

Ajay
