Hi Florian
Thank you very much for your quick reply.

But still Something is not clear to me from your last reply.

Q. how to switch of the automatic installation of the geant4 data files ?
I have tried to do that after switch off the geant4 file inside the ./configure.sh but again same error is coming.

Again I have done as you told me and tried with both the options with internet & Directory but same error is appearing.
I am attaching here error file which are coming from both the way.Plz see them & kindly tell me what I have to do.

Thanks & Regards
Ajay
