Dear all,

I installed the sep12 external package, and the last version of pandaroot.
When I tried to run a simple macro I got the following error message.
could you please help me?

Thanks
Elisa

```
root -l run_sim.C
dlopen error: libPythia6.so: cannot open shared object file: No such file or directory
Load Error: Failed to load Dynamic link library
/home/fioravanti/sep12/tools/root/lib/libEGPythia6.so
Warning: Return value of void basiclibs() ignored
