Hi Elisa,

     I had same error in serial as you have(dlopen & FairRunSim).
you have already removed dlopen error after loading libPythia6.so in your macro.
Now for FairRunSim you have to load config.sh in your pandaroot build directory
> . config.sh

After this you remove CMakeCache.txt and config.sh from your build directory and do again in
build directory as following.
> cmake ../
>make

May be it will help in your case also.
