Dear Stefano and all,
I noticed one bug in fts macro, as I run simulation macro and open output using TBrowser and try to draw histograms using TreeViewer it crashes but the same in PID or MVD works fine!!
Also if I try to look in to hits/points in TBrowser, It is empty some times and not showing any hit on detector.

Is it so with all or just with my Pandaroot? Can you please tell me why this is happening?
