Hi Raphael,

This is not a general problem of FairRoot, but a very special one and I am working on the problem. It is related with the fact that we define in the run_rutherford.C macro a Alpha particle which is already predefined in Geant4. If you define in the FairIonGenerator a particle with Z,A,Q = 3,6,3 instead of the Alpha the macro will work.

I hope I will fix the problem today or tomorrow.

Ciao

Florian
