Hi..

     I am Ajay Kumar(Research Scholar) from IIT Indore,India.I do not have fast computers for simulation here in my institute thats why simulation ,digitization,reconstruction,pid process taking more time.I have noticed that it takes approx. 12-14 hours or more for 10^5 events in case of each macro.

So can I have some grid or cluster account?
By using that it will be possible for me here.

Another one thing is that I wanted to download some document(talks & papers) from the PANDA document section but could not do that,while already I am having panda forum & pandaWiki account. somehow it requires "Panda Confidential page Authorization".

Is there any other account to access these documents?

Thanks.
