Subject: Material budget studies with MVD

Posted by Ajay Kumar on Tue, 15 Jan 2013 14:40:29 GMT

Hi all,

I have plotted material map for MVD and MVD with Lambda disks in the representation of fractional radiation length[x/x0]. I have simulated neutral geantino particle for the one million events to extract the material map with and without Lambda disks. I have attached MVD radiation length plot here.

Can anybody give some suggestions on these plot to me?

Is it ok?

I'm sending in the next mail with lambda disks.

Thanks in advance.
